Pictoresque Lehigh Valley Railroad, via Niagara Falls.

GRAND TRUNK NEW SINGLE ARCH DOUBLE TRACK STEEL BRIDGE OVER THE NIAGARA RIVER.

The new bridge is a single steel arch of 100 feet in length, supplemented by a trussed span at either end, of 100 feet in length. This with the approaches, makes the total length of the bridge slightly over 1,300 feet. The railway tracks surmounting the bridge are 33 feet above the water. The bridge has two decks or floors. On the upper deck there are two tracks for railway purposes exclusively, while the lower floor contains 3 wide central carriageways, double electric railway tracks, and on either side passage way for pedestrians.

As an evidence of the enormous strength of this beautiful structure, the arch is designed to carry on each railway track a load of two locomotives with four pairs of drivers each, and 6,000 pounds on each pair, followed by a train of 2,000 pounds per running foot, and is designed to carry in addition a live load of 2,000 pounds per running foot, on the lower floor. The general public will, however, probably be better able to arrive at a correct understanding of the enormous sustaining power of the new bridge by the fact that it is calculated to sustain a weight of something over six times the sustaining capacity of the historic Suspension Bridge, which it replaces.

GRAND TRUNK NEW SINGLE ARCH DOUBLE TRACK STEEL BRIDGE
OVER THE NIAGARA RIVER.

The new bridge is a single steel arch of 330 feet in length, supplemented by a trussed span, at either end, of 155 feet in length. This with the approaches, makes the total length of the bridge slightly over 1,000 feet. The railway tracks surmounting the bridge are 225 feet above the water. The bridge has two decks or floors. On the upper floor there are two tracks for railway purposes exclusively, while the lower floor contains a wide central carriageway, double electric railway tracks, and on either side passageway for pedestrians.

As an evidence of the enormous strength of this beautiful structure, the arch is designed to carry on each railway track a load of two locomotives with four pairs of drivers each and 40,000 pounds on each pair, followed by a train of 5,000 pounds per running foot, and is designed to carry in addition a live load of 2,000 pounds per running foot on the lower floor.
